

MultiCloudApp — AWS CloudOps Platform

Overview

MultiCloudApp is a **CloudOps Command Center** built on AWS EKS. It demonstrates containerized deployments, monitoring, and AI anomaly detection — adaptable for any industry (Healthcare, BFSI, Travel, Retail).

Current Achievements

- AWS EKS cluster provisioned with Terraform
- Dockerized frontend & backend pushed to AWS ECR
- Kubernetes deployments & services running
- NodePort/LoadBalancer services exposed
- PowerShell transcripts for reproducibility

Future Goals

- Multi-cloud expansion (Azure, GCP)
- Mobile app layer (React Native / Flutter)
- Sector-specific dashboards (Hospital, BFSI, Travel, Retail)
- CI/CD pipelines with GitHub Actions
- AI-powered anomaly detection integrated with Prometheus

Quick Start

```
“powershell terraform init terraform apply aws eks update-kubeconfig --region ap-south-1 --name multicloud-eks kubectl apply -f k8s/
```

2. Supporting Markdown Files (in /docs)

- **SETUP.md** → Installation steps for Windows (Terraform, Docker, kubectl, Helm, AWS CLI).
- **MONITORING.md** → Prometheus & Grafana setup, dashboard screenshots.
- **AI.md** → IsolationForest anomaly detection script + integration notes.
- **FUTURE.md** → Roadmap for hospital, BFSI, travel, retail use cases.
